

Made4net

Company profile

Made4net is an international company that develops comprehensive and innovative supply chain management solutions.

Made4net was founded in 2002 by IT supply chain veterans who had the vision that modern logistics IT systems should work as distributed components integrating seamlessly customers, vendors, and service providers to create true collaboration across the supply chain.

The mission of Made4net is to turn supply chain challenges into opportunities for operational excellence by lowering operational costs, improving customer service, and creating value and competitive advantage for its customers. By providing integrated best-of-breed software components, Made4net has become a one-stop-shop for IT system needs in the supply chain execution of manufacturers, distributors, logistics service providers, and retailers.

Made4net boasts a team of top professionals in the fields of logistics tools and solutions, supply chain execution implementations and software development with decades of accumulated experience in each of these fields. Leveraging this experience, Made4net has quickly established valuable credentials with its solutions and successful implementations.

Made4net is headquartered in the U.S. Its office in Israel covers EMEA and global support, and its office in China covers operations in the Far East. Together the three offices provide 24/7 support for all customers. A global network of accredited local business partners extends our reach across all five continents.

Hundreds of customers use our solutions, including **Procter & Gamble, Mitsubishi, Tuborg Beer, Lekkerland, K&M Style (L'Oreal), Dominante, UPS, FedEx, DHL, ZIM, Intel, Fritz (HP)** and many others.

Made4net software solutions meet the needs of supply chain execution and supply chain network synchronization:

SCExpert™ - Supply Chain Execution product Suite:

All these solutions operate under the same platform. Therefore, Made4net is uniquely positioned to address the future growth needs of its customers in other areas of supply chain management using the same

application and interface. This eliminates the cost of expensive integration with other systems and provides the full functionality of high-end products in a standard package suited for implementations of any size.

NetLog™: Logistic-oriented platform

For supply chain visibility and integration. The platform enables rapid and simple B2B supply chain collaboration by connecting organizations with their suppliers and with their customers through a network of logistics objects.

Netlog is focused on logistics service providers sharing real-time supply chain information with their customers and service providers by creating a centralized and unified view across the supply chain.

Technology Platform

Made4net solutions are built on Microsoft .NET technology, with a Web user interface and a service-oriented architecture comprising built-in services such as Rules engine, Full audit trail, Performance management and KPIs, Event management, API

Integration Layer and RFID enabler. The standard user interface layers support: desktop users, mobile/RF users and voice terminals. As set of advanced tools enable user interface customization and integration.
